

BUILT FOR TEA GARDENS

Complete operations system for tea garden management.

Biometric face attendance, smart Bluetooth scale weighment, and complete offline estate accounting. From field leaf to office ledger.

MIS DASHBOARD

DOMAIN ARCHITECTURE

Why generic software fails in tea gardens.

Tea plantations operate in remote valleys with zero network and complex task math. Standard software breaks down in the field. GardenSuite is built from the bush up.

100% offline field resilience

Deep tea sections in Dooars, Terai, and Assam have zero cellular coverage. SQLite on-device engine records all face scans and weighments locally with zero stalling. Data syncs in 60 seconds when back in range of office Wi-Fi.

Face biometrics coupled to weight

Certified Bluetooth scale hook transmits gross and tare weight directly to the worker's verified face scan. Completely eliminates handwritten paper chits, delayed clerical transcription, and proxy plucker fraud.

Native tea garden mathematics

Built-in computation for daily task hazira (24 kg standard), over-plucking incentives (rate/kg), basket tare deductions, moisture water cuts, and statutory 12% garden PF without error-prone Excel sheets.

Direct on-ground Siliguri support

We are based at Bagdogra and Siliguri, right beside the tea belts. Our hardware engineers visit your estate in person for scale pairing, biometric enrollment, calibration, and on-site boidar training.

One
MOAT

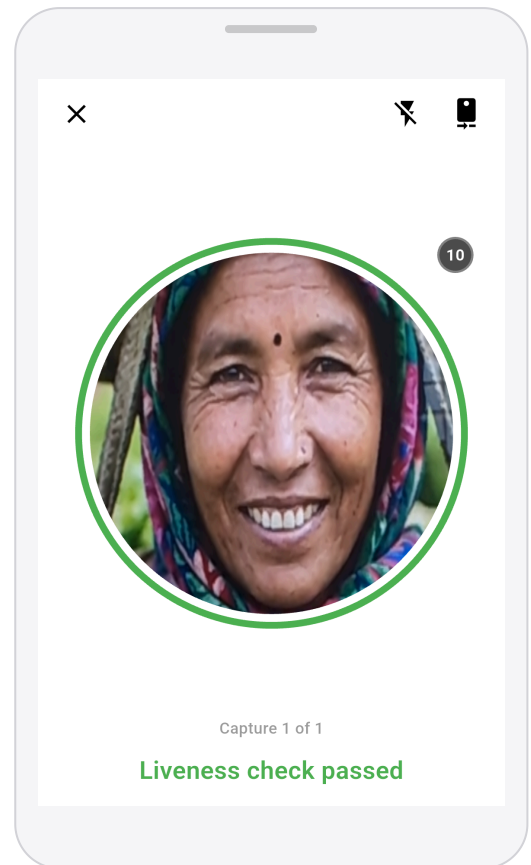

Engineered for tea plantation reality. Zero reliance on continuous cloud internet in the section, zero manual paper chits, and automatic estate compliance.

BIOMETRIC VERIFICATION

Face attendance right in the section.

Fast on-device face verification stops buddy punching and ghost workers. Works offline in morning mist, direct sun, or shade.

-  **Sub-2-second match** - mathematical vector recognition runs locally on Android phones without cloud lag.
-  **Liveness check passed** - verifies real worker presence and stops photo or proxy punching.
-  **Section & job allocation** - assign pluckers to division, section, and specific work code instantly.
-  **Privacy & encryption** - only mathematical embeddings stored; no raw biometric photos saved.

Offline vector engine

Mathematical face embeddings match in under 2 seconds on standard Android phones with zero cellular signal.

Active liveness check

Depth and motion verification confirms real worker presence, stopping printed photos or proxy buddy punching.

Section muster allocation

Assigns pluckers to division, section, kam, and boidar code right at 06:30 AM before picking up baskets.

2 Sec
SPEED

Instant morning muster roll. Workers are verified and allocated to their sections before picking up their baskets, eliminating paper rolls.

PRECISION HARVEST

Leaf weight linked directly to verified face.

Plucking leaf weight transmits wirelessly from the hanging scale to the Android app. No handwritten chits or manual typing errors.

-  **Wireless BLE 5.0 hook** - weight locks automatically on the app screen in seconds.
-  **Automatic tare deduction** - preset bag weight and moisture allowance subtracted on the spot.
-  **Worker day total** - pluckers hear and verify their cumulative day plucking weight immediately.
-  **Tamper-proof record** - plucker face, timestamp, and net kilograms sealed atomically.

BLE 5.0 wireless hook

Transmits certified net leaf weight straight from the hanging scale to the supervisor phone in 1 second.

Automatic tare & water cut

Preset bag tare (2.4 kg) and rainfall moisture allowance are subtracted on the spot without manual arithmetic.

Voice day-total broadcast

The Android app speaks the worker cumulative day plucking weight aloud for clear, dispute-free verification.

Zero
PAPER CHITS

Direct scale-to-phone data capture. Stops leaf weight manipulation, handwritten chit errors, and delayed weighment transcription.

5-STEP OPERATIONAL CYCLE

From morning muster to cloud MIS in 5 steps.

A proven daily routine followed across 20+ tea estates in North Bengal and Assam.

01

Morning Hazira Verification

Workers scan their face at field muster stations. Biometric match runs locally on Android phones in under 2 seconds. Section, muhuri, and task job codes are allocated immediately.

06:30 AM
ZERO PROXY

02

Smart Bluetooth Leaf Weighment

Midday and evening leaf weighment at section collection points. Weight transmits wirelessly from hanging scale hook directly into the worker's open attendance record.

11:30 AM / 03:30 PM
DIRECT BLE

03

60-Second Estate Office Sync

Supervisor brings mobile phone within range of the estate office local Wi-Fi. All face transactions and leaf weights transfer directly to the desktop database server in seconds.

05:00 PM
OFFLINE FIRST

04

Automated Kamjari & Task Costing

Garden office runs daily kamjari with one click. Daily plucking task (24 kg), over-plucking rates, bag tare deductions, and moisture allowances calculate automatically without clerical spreadsheets.

05:30 PM
ONE-CLICK RUN

05

Executive Cloud MIS & Statutory Pay

Daily harvest totals upload securely to the management cloud dashboard for owners and visiting agents. Fortnightly wages, PF ECR files, and pay slips are compiled ready for bank disbursement.

06:00 PM
MANAGEMENT CLOUD

5

STEPS

Complete operational transparency. Field leaf balances with factory gate intake before the evening shift ends, eliminating unexplained leaf shrinkage.

ESTATE ACCOUNTING

Daily kamjari and statutory wages in minutes.

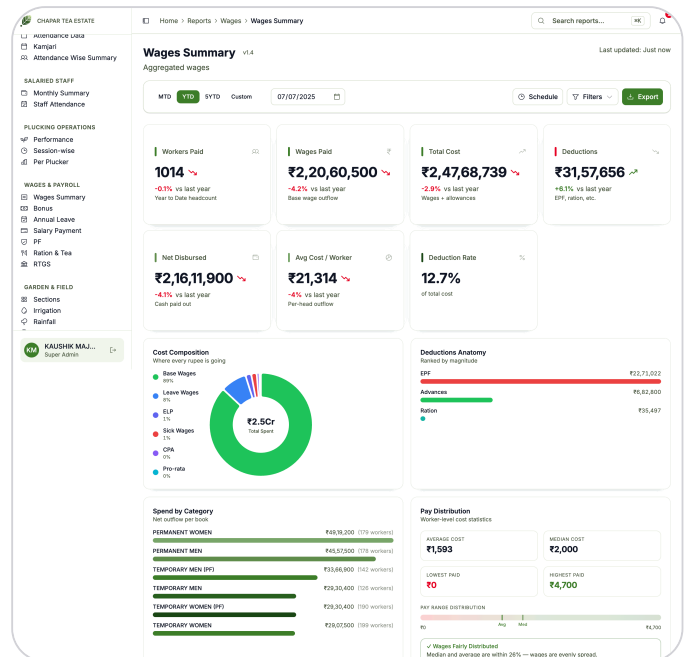

One-click calculation for basic task hazira, over-plucking incentives, and garden payroll without clerical spreadsheets.

 **Audited estate figures** - 870,535 kg green leaf, 32,435 mandays, ₹2.20 Cr wages processed.

 **Native task formulas** - basic hazira (24 kg task) + over-plucking rates (₹4.50/kg) computed accurately.

 **Statutory returns** - fortnightly wages, 12% PF returns, ESI, bank pay sheets, and wage slips.

 **Productivity audit** - average plucking yield (26.84 kg/day), rounds, and below-task worker lists.

Daily kamjari

Daily deployment, mandays summary, plucking averages, and section-wise costing.

Wages & salary

Fortnightly task wages, staff salary, payslips, carry-forward coins, and bank RTGS sheets.

Statutory reports

PF ECR returns, leave with wages, annual bonus, sick, maternity, and muster rolls.

₹2.20 Cr
WAGES AUDITED

Zero clerical calculation delay. Final fortnightly wages and statutory PF returns generated within 15 minutes of closing the muster period.

OPERATIONS & INVENTORY

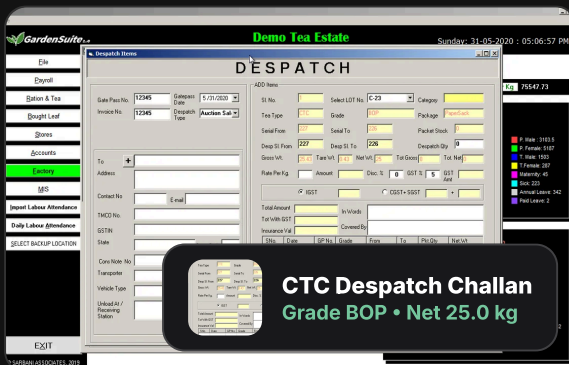

Track factory leaf intake, made tea outturn, and stores.

Reconcile weighbridge green leaf with made tea outturn, and track section-wise inventory for fertilizers, fuels, and rations.

Factory & despatch challans

Gate weighbridge leaf intake reconciliation, CTC made tea outturn, grade-wise sorting (BOP, BP, OF, PD), packing sizes, GST invoices, and despatch challans.

Leaf reconciliation - gross, tare, and net weighbridge intake balanced against plucking collections.

CTC made tea outturn - track recovery percentage across BOP, BP, OF, and PD grade assortments.

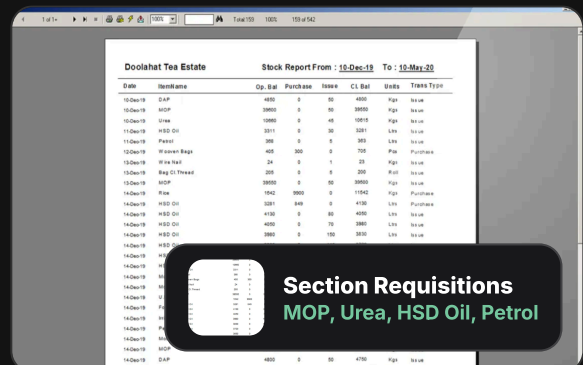

GST despatch invoices - automated buyer sale challans, road transit forms, and audit registers.

Store stock & consumption

Purchase register, supplier bills, and section-wise requisitions for fertilizers (Urea, MOP, DAP), fuel (HSD, Petrol), and weekly worker ration distribution.

Fertilizers & agrochemicals - section requisitions for Urea, MOP, DAP, and foliar sprays.

Fuel & genset registers - diesel (HSD) and petrol consumption logs for factory machinery and tractors.

Worker ration distribution - weekly ration issues (wheat, rice, tea) with automatic wage deductions.

100%
TRACEABILITY

Full estate audit trail. Every kilogram of green leaf is reconciled from bush to weighbridge, withering, made tea packing, and GST despatch.

EXECUTIVE VISIBILITY

Estate figures on your phone, anywhere in the world.

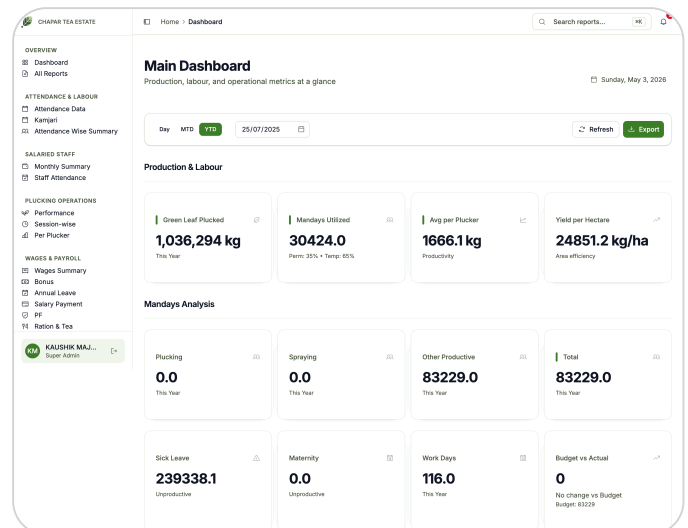

Offline reliability at the garden office, with secure cloud viewing for directors, owners, and visiting agents.

 **View from anywhere** - access live daily harvest, labour, and factory data from phone, tablet, or laptop.

 **Executive metrics** - season-to-date leaf harvest (1,036,294 kg), plucking averages, and yield per hectare.

 **Multi-garden overview** - estate groups can compare performance across multiple gardens under one login.

 **Local data sovereignty** - garden office retains full offline master data; cloud receives read-only summaries.

Yield per hectare

Compare section-wise green leaf productivity, plucking rounds, and bush health across your entire estate.

Multi-garden view

Company directors monitor multiple estates across Assam and Bengal under one centralized, secure management login.

Data sovereignty

The garden office maintains 100% offline master records; the cloud dashboard receives encrypted read-only summaries.

Daily
MIS

Best of both worlds. Estate operations run 100% reliably on local office PC without internet dependencies, while management enjoys real-time cloud visibility.

PROVEN IMPLEMENTATION

25+ years supporting tea estates across North Bengal & Assam.

Built and maintained by Sarbani Associates (Bagdogra, Siliguri). Serving 20+ tea estates since 2000.

Phase 1: Estate survey

Review weighment points, muster locations, task wage formulations, and hardware requirements with management.

Phase 2: Hardware setup

Install local garden office server, pair certified Bluetooth hanging scales, and configure automated backups.

Phase 3: Worker enrollment

Register plucker face vectors and employee codes on site. Calibrate scale bag deduction and moisture allowances.

Phase 4: Parallel run & training

On-ground coaching for supervisors, boidars, and clerks. Final daily kamjari produced within 7 days of installation.

20+
ESTATES

Local technical presence. Sarbani Associates team in Bagdogra and Siliguri is always within driving distance for on-ground visits. *Many estates keep software details private.*

BOOK AN ON-ESTATE DEMO

See face attendance and smart weighing live on your garden.

We bring the hardware to your estate, run a live section weighment demonstration with your own pluckers, and produce your daily kamjari report on site.

We bring the hardware

Smart Bluetooth hanging scale hook, Android phones, and mobile field printer brought directly to your estate.

Test with your pluckers

Enroll 20 of your pluckers in 5 minutes and run a live weighment session right at your section weighment point.

Instant estate kamjari

Watch the trial weighments sync to the office computer and calculate into mandays and wages in under 15 minutes.
