TRAINING TIME

COMPLETE WORKFLOW

Follow These 9 Steps

Start at Step 1 on the Dashboard. End at Step 9. Each step builds on the previous one.

STEP 1 OF 9 - DASHBOARD

Configure Master Data

Configure your worker profile database, garden sections, and activity work codes on the Web Dashboard before opening the mobile app.

1 Add Workers

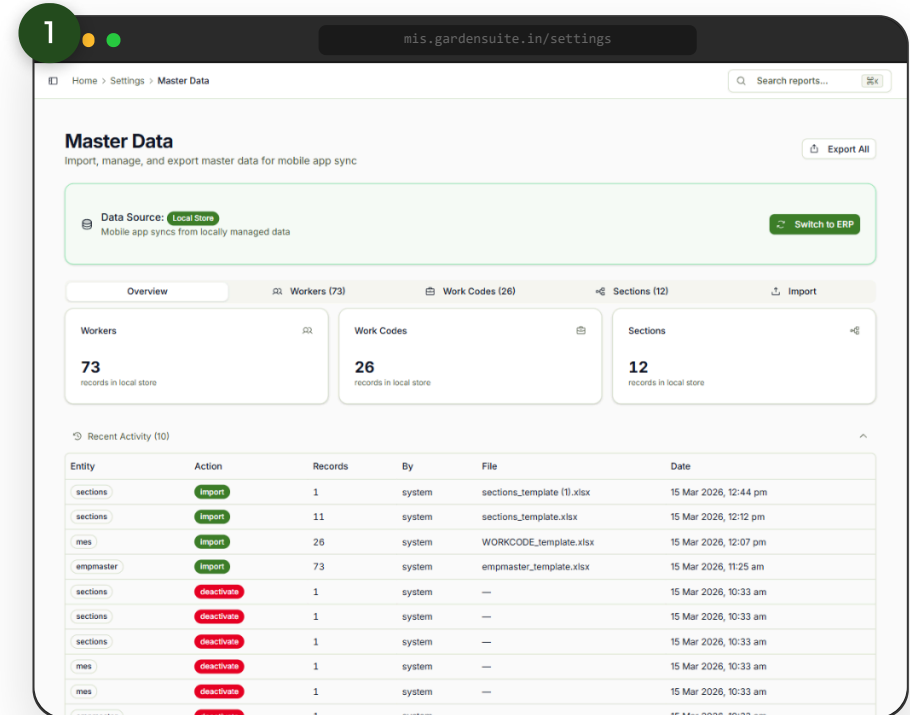

Enter worker details, PF/ESI codes, and assign divisions on the Dashboard.

2 Define Work Codes

Set up agricultural activities like Plucking, Weeding, or Factory task codes.

3 Add Section Map

Enter physical block divisions to map plucking weights accurately.

STEP 2 OF 9 - MOBILE APP

Sync Data to Phone

Download workers, divisions, and active work codes from the cloud database to the mobile device. This syncs the offline app database.

1 Open App Settings

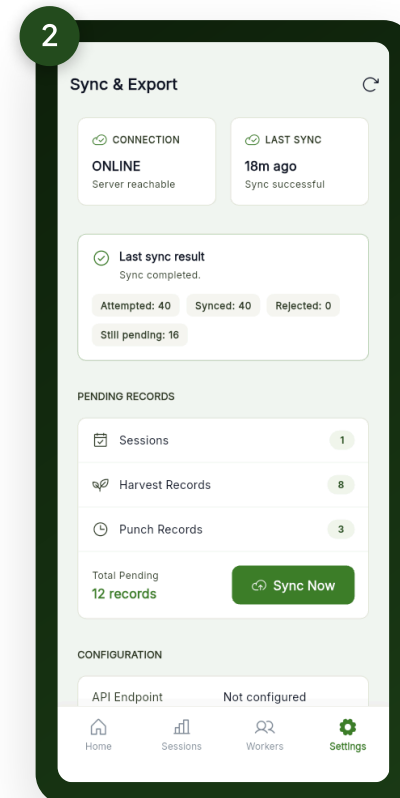

Tap the gear icon on the main app dashboard.

2 Verify Server URL

Ensure the correct garden server domain is set (provided by Sarbani Associates).

3 Tap "Sync Now"

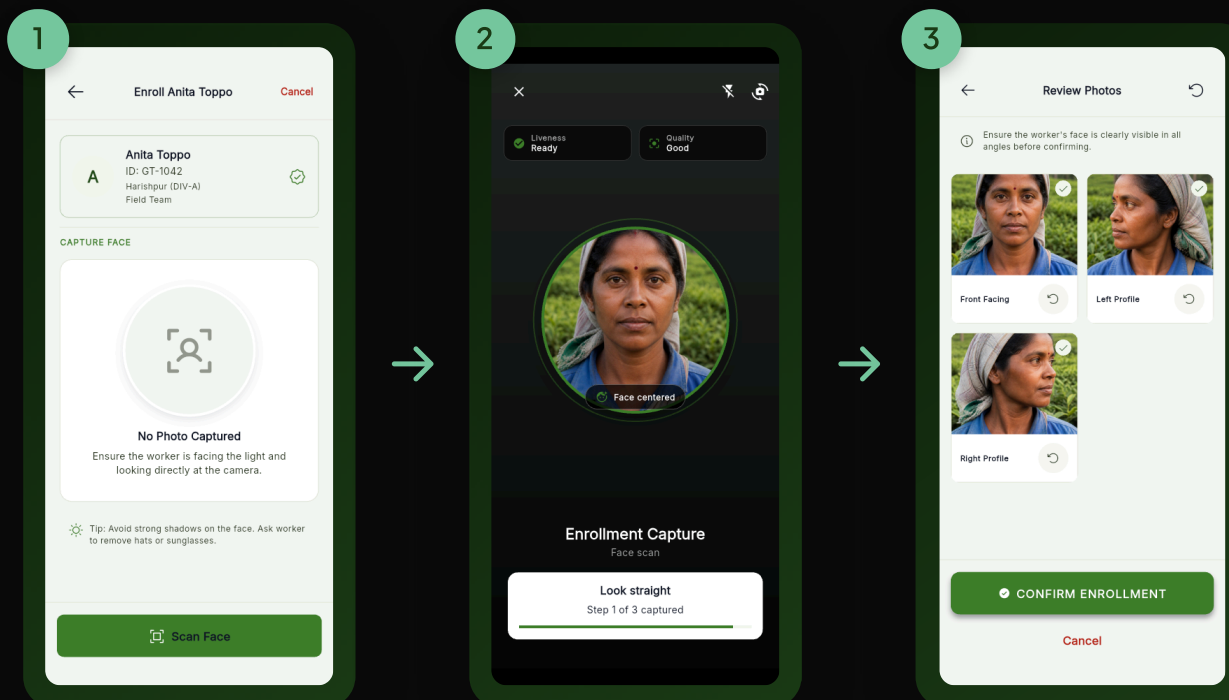

Downloads the latest employee profiles and settings to the phone's offline database.

STEP 3 OF 9 - MOBILE APP

Enroll Worker Faces

Register worker biometric profiles. Follow three steps: select worker name, capture face in good lighting, and review and save.

**1 Select Worker Name**

Search by code/name or scroll active master database.

2 Biometric Capture

Look straight into camera in bright daylight. Avoid shadows.

3 Review & Save

Check image quality, verify details, and tap Save Profile.

STEP 4 OF 9 - MOBILE APP

App Configuration

Biometric thresholds, active camera selection, and database import/export options are pre-configured. Do not adjust these values without support.

1 Recognition Threshold

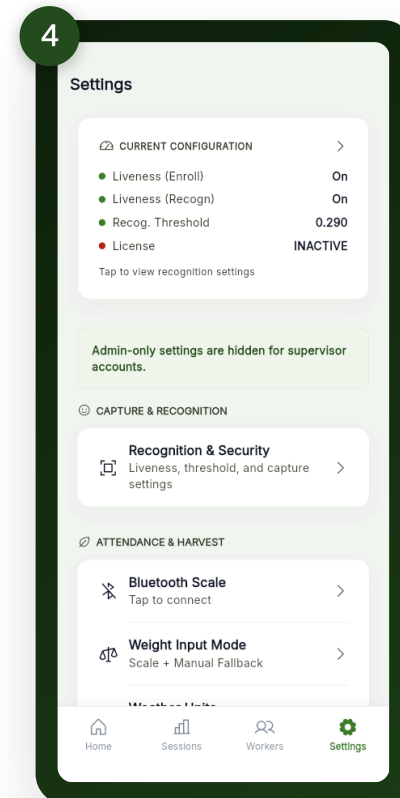

Set to locked brand-safe values (0.75-0.80) to optimize recognition accuracy and speed.

2 Camera Selection

Toggle between front and rear cameras depending on your weighing setup.

! Biometric Data Backup

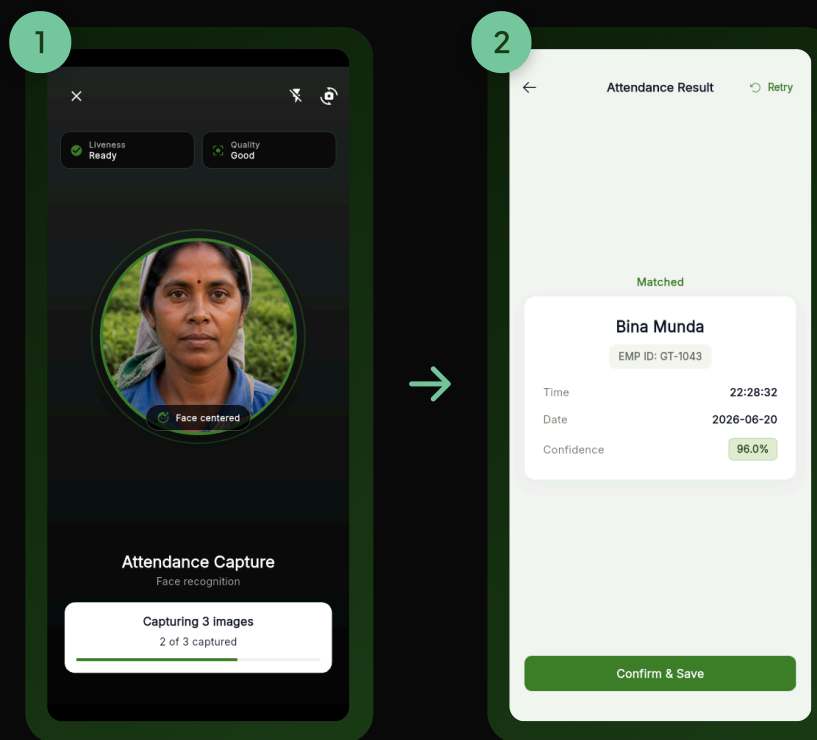

Backup face databases offline. Do not change default database locations.

STEP 5 OF 9 - MOBILE APP

Mark Harvest Attendance

Link plucking weights to verified worker faces. The offline smart weighing system registers weight directly against the scanned biometric profile.

1 Scan Face

Position the device camera towards the plucker. Recognition is on-device and instantaneous.

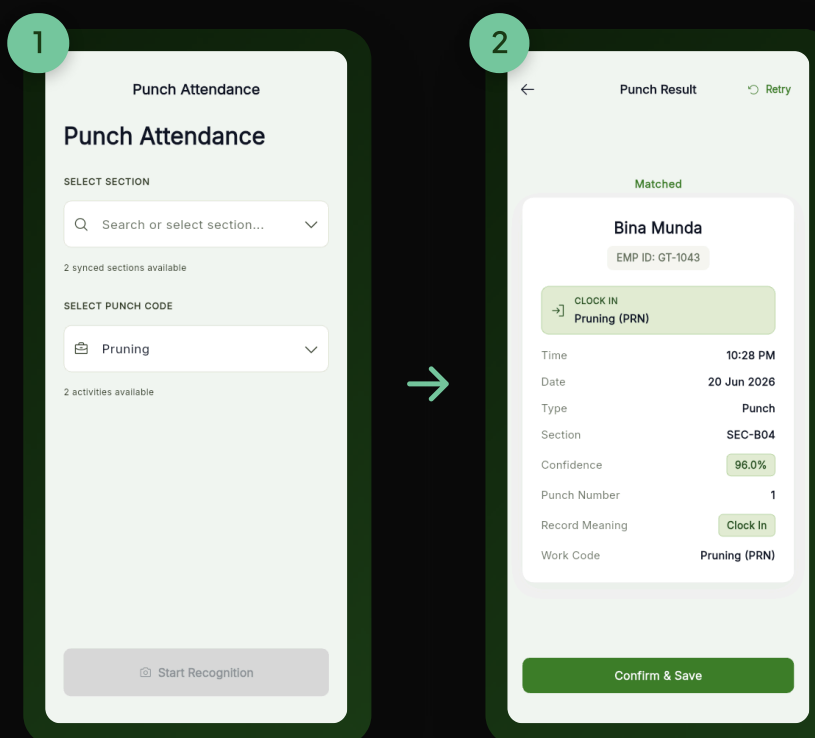

2 Weigh & Save

Verify name on screen. Plucking weight downloads automatically from the scale. Tap Save.

STEP 6 OF 9 - MOBILE APP

Mark Punch Attendance

Mark biometric hazira (clock-in/clock-out events) for general workers, garden staff, and tea factory personnel.

1 Biometric Verification

Position worker face inside camera guidelines. Face matching takes less than 1 second.

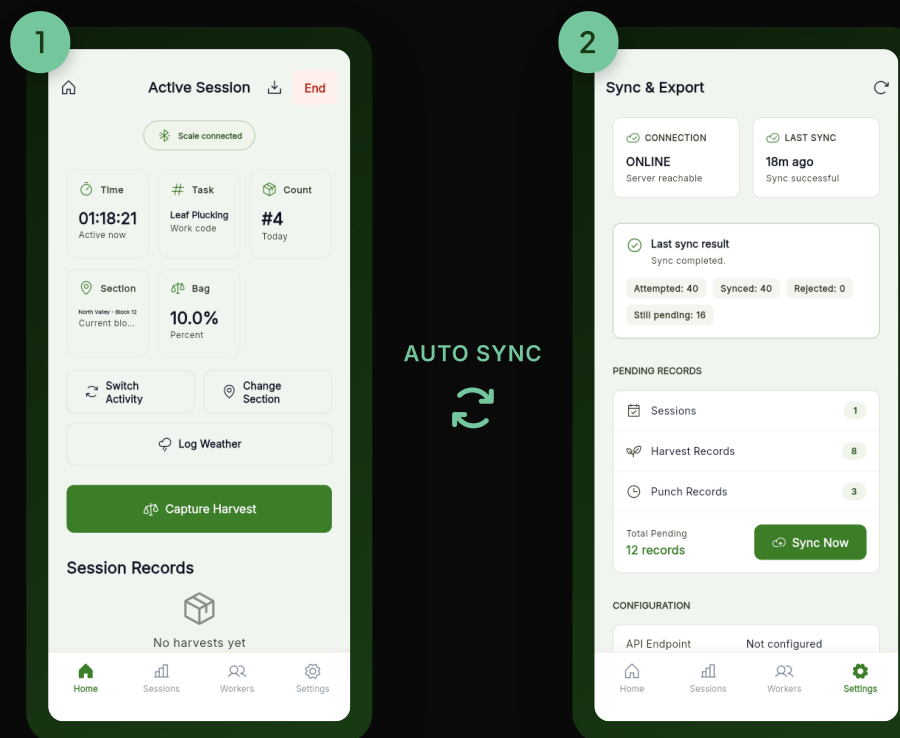

2 Punch Confirmed

Audible confirmation sounds. The system logs the exact timestamp and division instantly.

STEP 7 OF 9 - MOBILE APP

Sync Attendance Data

Attendance data is automatically synced to the cloud. You only need to trigger a manual sync if records are late or connection was lost.

1 Automatic Upload

The app automatically syncs all punches and weights to the Dashboard when internet is active.

2 Sync Only If Late

If data is delayed or connection was weak, open Settings and tap "Sync Now" to force a manual sync.

STEP 8 OF 9 - DASHBOARD

Verify Synced Attendance

Open the cloud dashboard to audit synced logs. Verify names, departments, divisions, and plucking weights against physical field books.

1 Load Attendance Panel

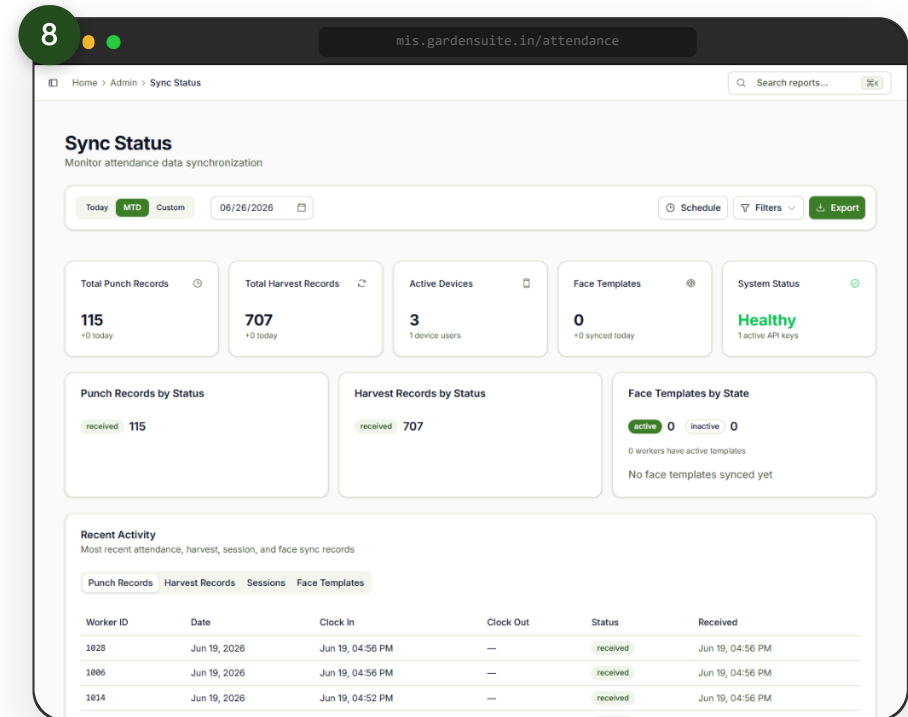

Open the Daily Attendance Audit page in your web browser.

2 Filter Date & Shift

Select the correct date and shift division to load synced worker records.

3 Audit Logs

Review biometric punch times and linked plucking weights. Flag or adjust anomalies.

STEP 9 OF 9 - DASHBOARD

Export Daily Reports

Download daily muster sheets, Kamjari reports, plucking summary spreadsheets, and raw audit logs directly into Excel for payroll processing.

1 Navigate to Reports

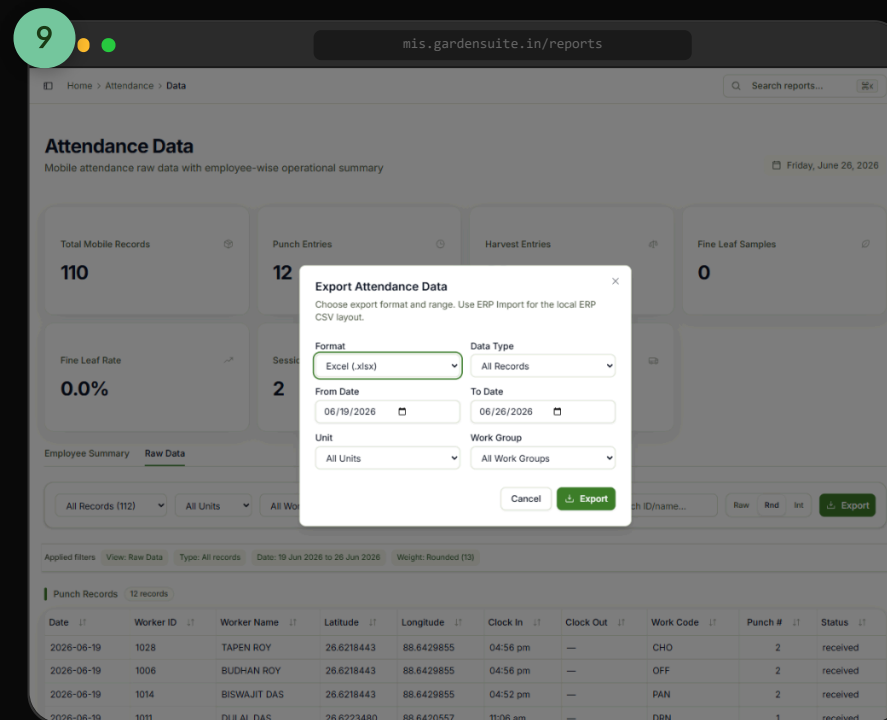

Open the Reports tab on the cloud Dashboard navigation panel.

2 Select Report Template

Choose from Daily Kamjari, Plucking weighing summary, or raw biometric logs.

3 Export to Excel

Click Export. The system compiles clean Excel sheets ready for payroll import.

FINAL REVIEW

User Acceptance Checklist

This checklist represents the official handoff agreement between the implementing team of **Sarbani Associates** and the client tea estate.

Please review and tick each checkbox only when the designated garden staff can perform the task independently.

Implementation Note

Biometric face profiles and weighing logs are stored in encrypted databases on the local devices, ensuring complete confidentiality.

MODULE	OPERATIONAL CAPABILITY DESCRIPTION	STATUS
Employee Master	Add, edit, and disable workers on the web dashboard.	☐
Work Code Master	Create and manage agricultural activities (Plucking, Weeding, etc.).	☐
Section Master	Map physical estate blocks and divisions on the dashboard.	☐
Master Data Sync	Sync newly added workers and sections to the offline mobile device.	☐
Face Enrollment	Register worker faces with correct lighting and framing.	☐
Harvest Attendance	Capture plucking weight linked with leaf weighing and face check.	☐
Punch Attendance	Capture standard clock-in/out events for staff and factory.	☐
Attendance Sync	Understand that attendance syncs automatically, and how to trigger manual sync if late.	☐
Dashboard Audit	View and audit daily synced attendance logs in the browser.	☐
Report Export	Export Daily Kamjari/Muster sheets to Excel.	☐

SIGN-OFF

Training & Acceptance Sign-off

By signing this document, both parties acknowledge that the step-by-step training for the **GardenSuite GS Face Attendance System & Dashboard** has been successfully completed.

The designated estate operators have demonstrated independent proficiency in all operational modules listed in the User Acceptance Checklist.
